# Project Growth - Burn Down Chart

Burndown Chart on Jira:

Observations:

1. We did not assign most user points until the sprint has started for one week. This has caused the flat line at the start and rapid increase on Jun 28th. This has also caused the reference line not reflecting the correct optimal burndown line.
2. All tasks started to complete after the first week into the sprint.
3. A good portion of tasks closed on the finish date of sprint.
